Executive Summary

Uranium Energy Corp (UEC) is a Tier 1 (USA / Canada) uranium producer and developer operating two ISR mines, Christensen Ranch in Wyoming and Burke Hollow in Texas, with no debt and US\$495M of cash at Jul 31, 2026 [1]. The Durrett 10-factor score is 6.2 / 10. Our sum of the parts (1.3x AISC, stage factors, 5% discount rate, fully diluted shares) gives \$3.99, \$5.36 and \$9.95 per share at U3O8 of \$85, \$100 and \$150, against a price near \$9.47 [5]. The \$100 case is well below the analyst average target of about \$16.1 [6].

The formula values only compliant resources. It excludes Sweetwater (about 175 Mlb of historical, non-compliant resources and a licensed mill bought for about \$175M), the conversion and titanium projects, which explains much of the gap to the market price [2][12]. Other drags are a slow ramp (229,294 lb in FY2026) with no FY2027 guidance [1][9], and heavy equity issuance, including a US\$600M ATM program [7]. Recommendation: Hold. Data Quality Score 6.20 / 10.

\$9.47	~\$4.7B	6.2 / 10	-43%
PRICE (USD)	MARKET CAP	DURRETT SCORE	SOTP VS. PRICE (BASE)

Recommendation: Hold. Balance sheet and resource base are strong, but the price already sits above the Durrett value even at \$150 uranium.

Market cap = \$9.47 x 495.6M shares outstanding [4][5]; fully diluted 503.3M [4]. No currency conversion required.

Table 2. Units: Mlb U3O8, contained. Wyoming and Burke Hollow figures are from UEC presentations [2], not checked against technical reports (prov.); Roughrider per S-K 1300 IA [3]. No reserves declared.

Plausible = P&P x 0.9 + (M&I minus reserves) x 0.65 + Inferred x 0.3. Wyoming: $66.2 \times 0.65 + 15.1 \times 0.3 = 47.6$ Mlb.
Burke Hollow: $6.15 \times 0.65 + 4.88 \times 0.3 = 5.5$ Mlb. Roughrider: $27.86 \times 0.65 + 33.38 \times 0.3 = 28.1$ Mlb.

Capital Raise Outlook (18 months)

Probability of a meaningful equity raise (about \$100M or more): about 55%; forced raise: under 5%. UEC has US\$753M of liquid assets and no debt, but raises equity regularly and keeps an ATM open [1][7]. Uses include Roughrider (US\$545M), Sweetwater, inventory purchases and the conversion strategy [3][9][13]. A \$500M raise at \$9.47 adds about 52.8M shares (10.7% of fully diluted).

Red Flags and Investor Concerns

Red Flag: Valuation. The price is above the Durrett value even at \$150 uranium; the market is paying for Sweetwater, Roughrider and conversion plans the formula does not value [2][5][12].

Red Flag: Production ramp and regulation. FY2026 production was 229,294 lb against about 4 Mlb/yr licensed capacity per hub; Christensen Ranch costs swung from \$54.61/lb in Q3 to \$35.63/lb in Q4; no FY2027 guidance [1][9].

Red Flag: Dilution. US\$449M of net equity in six months, an open US\$600M ATM and 503.3M fully diluted shares [4][7].

Red Flag: Resource quality. Sweetwater's 175 Mlb is historical and not compliant; Wyoming and Burke Hollow figures are company-presentation numbers; Roughrider has no reserves and 54% inferred pounds [2][3].

Observations and Next Steps

Watch the new header houses, Burke Hollow ramp, the Sweetwater EA (March 2027) and Plan of Operations (May 2027), the first FY2027 quarter in December and conversion-project NRC licensing. Verify Wyoming and Burke Hollow resources, the derived equity-securities figure, in-process inventory, reclamation obligations and interest income. UEC is not in the readable part of the project RAG JSON.

Data Quality Audit

Data Quality Score 6.20 / 10 (accuracy 6.0, source reliability 6.0, internal consistency 7.0; weighted 0.5 / 0.3 / 0.2). Verified: FY2026 production, costs, cash, liquid assets, inventory [1]; Roughrider resource, capex, AISC [3]; share structure [4]; ATM and offering history [7][8]; G&A and options [10]. Provisional: Wyoming and Burke Hollow resources [2]; ISR AISC proxy, lives, start dates; derived equity securities and URC stake estimate [14]; in-process inventory; analyst data [6]. Internal self-assessment, not an independent audit.
