## Executive Summary

Western Uranium & Vanadium is a Tier 1 (United States) uranium-vanadium exploration-stage company with a permitted, ramping-up Sunday Mine Complex in Colorado and a San Rafael project in Utah that is still in permitting [4][3]. The Durrett 10-factor score is **5.0 / 10**. Our sum of the parts (1.3x cost proxy, stage factors, 5% discount rate) gives **\$0.25, \$0.46 and \$1.16** per share at U3O8 of \$85, \$100 and \$150, against a price near \$0.34 [1][5]. No analyst targets were found, and WUC has no economic study, so costs are borrowed from a peer PEA [11].

Dilution and funding, resource quality (a 2015 NI 43-101 and historic San Rafael pounds) and weak price action are the main drags [1][2][3][5]. Recommendation: **Hold (speculative)**. Data Quality Score 6.60 / 10; the audit lists what remains provisional.

|                 |                |                 |                    |
|-----------------|----------------|-----------------|--------------------|
| <b>\$0.34</b>   | <b>~\$24M</b>  | <b>5.0 / 10</b> | <b>+35%</b>        |
| PRICE (USD) [5] | MARKET CAP [1] | DURRETT SCORE   | SOTP UPSIDE (BASE) |

**Recommendation:** Hold (speculative). Base value is above the price, but the \$85 case is below it and a large equity raise is likely.

Market cap = price x 71.85M shares outstanding [1]; aggregator figures range from \$22M to \$27.6M. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

### Project List

| PROJECT                                                                          | LOCATION                    | OWNERSHIP         | STATUS                                                                                                                                       |
|----------------------------------------------------------------------------------|-----------------------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Sunday Mine Complex<br>(Sunday, Carnation, St. Jude,<br>West Sunday, Topaz, GMG) | San Miguel Co.,<br>Colorado | 100%              | Fully permitted and operational; ore<br>sold to White Mesa under a 25,000-ton<br>agreement; delivery program<br>concluded Jul 2026 [4][8][9] |
| San Rafael                                                                       | Emery Co., Utah             | 100%<br>(assumed) | Permitting; historic resource, not<br>current NI 43-101 [3][12]                                                                              |

Table 1. Sources: [3][4][5][8][9][12]. Ownership other than Sunday is not verified and is marked as assumed. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

## Project Locations

Figure 1. Schematic map, not to scale; positions approximate. Sunday and Mustang are in western Colorado; San Rafael is near Green River, Utah; White Mesa Mill is near Blanding, Utah [4][10]. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

## Reserves, Resources and Plausible Value

| PROJECT                                  | P&P  | M&I total | M&I ex-reserves | INFERRED | PLAUSIBLE | ATTRIBUTABLE |
|------------------------------------------|------|-----------|-----------------|----------|-----------|--------------|
| Sunday U3O8 (100%)                       | 0.00 | 1.01      | 1.01            | 1.91     | 1.23      | 1.23         |
| San Rafael U3O8, Deep Gold (100%, prov.) | 0.00 | 2.42      | 2.42            | 0.59     | 1.75      | 1.75         |
| Sunday V2O5 (co-product)                 | 0.00 | 6.05      | 6.05            | 11.44    | 7.36      | 7.36         |
| <b>Total attributable U3O8</b>           |      |           |                 |          |           | <b>2.97</b>  |

Table 2. Millions of pounds contained (not recoverable), 100% basis. Sources: Sunday NI 43-101, A. Adkins, effective July 7, 2015: measured 935,150 + indicated 72,683 lb U3O8; inferred 1,906,081 lb; V2O5 6,047,000 M&I and 11,436,484 inferred; tons 203,217 M&I and 264,604 inferred [2]. Older than 3 years, flagged OUTDATED. San Rafael: Deep Gold deposit only, historic indicated 2,415,300 lb (475,000 t at 0.25%) and historic inferred 587,800 lb (92,350 t at 0.32%) U3O8 [3][12] (prov.). The project-wide historic figures (3,404,600 lb indicated; 1,859,500 lb inferred) [13] and the ratio-based vanadium (about 4.6M lb V2O5) are excluded as the conservative choice. No reserves are declared. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

Plausible = P&P x 0.9 + (M&I minus reserves) x 0.65 + Inferred x 0.3. Sunday U3O8: 1,007,830 x 0.65 + 1,906,081 x 0.3 = 655,090 + 571,824 = 1,226,914 lb (1.23 Mlb). Sunday V2O5: 6,047,000 x 0.65 + 11,436,484 x 0.3 = 3,930,550 + 3,430,945 = 7,361,495 lb. San Rafael U3O8: 2,415,300 x 0.65 + 587,800 x 0.3 = 1,569,945 + 176,340 = 1,746,285 lb (provisional). Total plausible U3O8 = 2.97 Mlb. Sunday plausible tons: 203,217 x 0.65 + 264,604 x 0.3 = 211,472 t, or 5.80 lb U3O8 and 34.8 lb V2O5 per ton.

## 10-Factor Analysis

| FACTOR                 | SCORE                      | RATING     | RATIONALE                                                                                     |
|------------------------|----------------------------|------------|-----------------------------------------------------------------------------------------------|
| Properties / Ownership | 6                          | Fair       | Sunday is 100% owned and permitted; San Rafael resource is historic [3][4]                    |
| People / Management    | 5                          | Fair       | Insiders hold about 7.3% [1]; going-concern language in Q2 10-Q [5] (provisional)             |
| Share Structure        | 5                          | Fair       | 71.85M basic shares [1]; options/warrants not verified; heavy raise needed to fund plan       |
| Location               | 7                          | Good       | Colorado/Utah, US; BLM permitting cycles add delay (Topaz plan cancelled 2024) [9]            |
| Projected Growth       | 5                          | Fair       | Revenue about \$0.4-0.6M a year [1][5]; growth depends on mill access and Mustang license [8] |
| Good Buzz / Chart      | 3                          | Weak       | Price \$0.31-0.34 vs 200-day \$0.475; 52-wk range \$0.27-\$0.84 [1]                           |
| Cost / Financing       | 3                          | Weak       | No PEA/PFS; cost proxy from a peer PEA [11]; going-concern warning [5]                        |
| Cash / Debt            | 4                          | Weak       | Cash \$3.52M, no reported debt [1]; losses \$1.2-1.6M a quarter [5]                           |
| Low Valuation Estimate | 7                          | Good       | EV about \$21M [1] is about \$7 per plausible lb U3O8 (2.97 Mlb)                              |
| Upside Potential       | 5                          | Fair       | Base SOTP +35%, but below price at \$85 uranium; assumption-heavy                             |
| <b>Total</b>           | <b>50 / 10</b><br><b>=</b> | <b>5.0</b> |                                                                                               |

Table 3. Equal-weighted, scored 1-10 under the Durrett 2.2 rubric. All scores are judgment calls; People, Share Structure and Cash/Debt are provisional. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

### Radar Chart

## Valuation: Sum of the Parts

Margin per ton = recovered uranium revenue + recovered vanadium revenue minus 1.3x operating cost. WUC has no economic study, so the cost base is a proxy: \$244 per ton from Anfield Energy's Velvet-Wood/Slick Rock PEA, a comparable Colorado Plateau underground project [11], padded 1.3x to \$317. Recoveries are 92% U3O8 and 75% V2O5 [11]. San Rafael grade is assumed equal to Sunday's plausible grade (5.80 lb/t), giving 300,992 t; its vanadium is excluded. Production is even over mine life, discounted at 5% (mid-year), multiplied by the stage factor, with future capex deducted at present value.

| PROJECT            | ATTRIB. Mlb | START (yrs) | LIFE (yrs) | OPEX \$/t | PADDED \$/t | STAGE |
|--------------------|-------------|-------------|------------|-----------|-------------|-------|
| Sunday             | 1.23        | 0.5         | 5          | 244       | 317         | 0.60  |
| San Rafael (prov.) | 1.75        | 5.5         | 7          | 244       | 317         | 0.40  |

Table 4. Opex proxy derived from the peer PEA [11], capex excluded and modeled separately. Start dates, mine lives and stage factors are analyst assumptions: Sunday 0.60 (permitted and operating, no reserves); San Rafael 0.40 (permitting, historic resource), following the Denison report's 0.8 / 0.6 / 0.4 convention. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

| USD MILLIONS                        | \$85   | \$100  | \$150  |
|-------------------------------------|--------|--------|--------|
| Sunday uranium NAV (stage-weighted) | 15.0   | 23.8   | 53.1   |
| Sunday vanadium NAV (co-product)    | 15.4   | 15.4   | 15.4   |
| San Rafael uranium NAV (prov.)      | 10.6   | 16.9   | 37.7   |
| Project NAV                         | 41.0   | 56.1   | 106.2  |
| Less: future capex (PV)             | (26.7) | (26.7) | (26.7) |
| Less: net debt (none reported)      | (0.0)  | (0.0)  | (0.0)  |
| Plus: cash / other assets           | 3.5    | 3.5    | 3.5    |
| Equity value                        | 17.8   | 32.9   | 83.0   |
| Per share (71.85M basic)            | \$0.25 | \$0.46 | \$1.16 |
| vs. current price (\$0.34)          | -27%   | +35%   | +240%  |

Table 5. Capex PV: Sunday ramp \$5.0M at 0.5 yr = \$4.9M (assumed); San Rafael \$27.2M at 4.5 yrs = \$21.8M (peer Slick Rock mine capex [11]). Cash \$3.52M at Jun 30, 2026 is secondary [1]. No convertible debt is reported; options and warrants are not included (unverified). Corporate overhead and Topaz reclamation are not deducted. Vanadium at \$5.36/lb [7]. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

## Sensitivities

| CASE (\$100 URANIUM)                               | PER SHARE | VS. BASE |
|----------------------------------------------------|-----------|----------|
| Base case                                          | \$0.46    | n/a      |
| Sunday NAV 25% lower (grade or recovery shortfall) | \$0.32    | -30%     |
| No vanadium credit                                 | \$0.24    | -47%     |
| San Rafael not developed (NAV and capex removed)   | \$0.53    | 15%      |
| \$10M equity raise at \$0.34 (29M shares)          | \$0.42    | -7%      |

Table 6. Illustrative; the 25% haircut, the vanadium and San Rafael cases, and the raise size are analyst assumptions, not company figures. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

## Analyst Cross-Check

| SOURCE                                                        | RATING | TARGET (USD) |
|---------------------------------------------------------------|--------|--------------|
| No broker or aggregator price targets located for WUC / WSTRF | n/a    | n/a          |

Table 7. Searches on Oct 7-8, 2026 returned no analyst targets; recheck before use. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

## Input Assumptions Disclosure

| INPUT                    | VALUE                              | BASIS                                                 |

Table 8. Every secondary-source input and assumption is labeled. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

### Capital Raise Outlook (18 months)

Probability of a meaningful raise (about \$5M or more): **about 80%**; forced raise to keep operating: **about 55%**. Cash of \$3.52M [1] compares with trailing operating cash flow of about -\$4.4M a year and quarterly net losses of \$1.2-1.6M [1][5], so runway is roughly two to three quarters before capital spending, and the Q2 10-Q carries going-concern language [5]. Near-term need is about \$8M (18 months of burn at \$6.6M plus \$5.0M Sunday ramp, less cash); developing San Rafael lifts it to about \$35M, or 144% of the current market cap.

| RAISE (USD) | PRICE  | NEW SHARES | DILUTION | VALUE / SHARE AFTER* |
|-------------|--------|------------|----------|----------------------|
| \$8M        | \$0.34 | 24M        | 33%      | \$0.36               |
| \$8M        | \$0.26 | 32M        | 44%      | \$0.33               |
| \$20M       | \$0.34 | 59M        | 82%      | \$0.35               |
| \$20M       | \$0.26 | 78M        | 109%     | \$0.31               |
| \$35M       | \$0.34 | 104M       | 144%     | \$0.35               |
| \$35M       | \$0.26 | 138M       | 193%     | \$0.29               |

Table 9. \*Base \$100 equity value less 18-month burn of \$6.6M, plus raise proceeds, over 71.85M plus new shares. The \$0.26 case is a 25% discount to market, an assumption. Warrants, options and any ATM program are unverified and would add dilution. This section is analyst judgment, not a sourced forecast. All figures in U.S. dollars (USD); no foreign-currency conversion was needed (the C\$ CSE quote was not used).

### Red Flags and Investor Concerns

**Red Flag:** Dilution and capital raise risk: a near-term raise of about \$8M at \$0.34 adds about 24M shares (33% of basic); the full plan of about \$35M would more than double the share count and cut base value from \$0.46 to about \$0.35 per share [1][5].

**Red Flag:** Going concern and liquidity: the Q2 2026 10-Q warns on going concern; cash was \$3.52M against trailing levered free cash flow of -\$2.9M [1][5].

**Red Flag:** Resource quality: Sunday's NI 43-101 dates from 2015 with no economic assessment [2]; San Rafael's pounds are historic and the company does not treat them as current resources [3][12]; the valuation uses a peer cost proxy and an assumed San Rafael grade.

**Red Flag:** Single-buyer dependence and permitting: ore goes to White Mesa under a 25,000-ton agreement; the Topaz plan was cancelled after the BLM review clock expired; the Mustang mill license is pending [8][9].

**Red Flag:** Cost / Financing (3), Good Buzz / Chart (3), Cash / Debt (4), Share Structure (5), People (5), Growth (5), Upside (5): no cost study, price below the 200-day average, and a funding gap versus market cap [1][5].

**Red Flag:** Vanadium dependence: vanadium is about \$140 of roughly \$674 revenue per Sunday ton at \$100 uranium, and its price is down more than 47% from the 2022 peak [7].

## Observations and Next Steps

Watch the Q3 2026 10-Q (mid-November) for cash, the going-concern note and any raise or ATM; the Mustang mill license decision; and any new or extended ore purchase agreement. Verify San Rafael ownership and resource basis, option and warrant counts, vanadium pricing, and whether a current NI 43-101 update exists.

## Data Quality Audit

Data Quality Score 6.60 / 10 (accuracy 5.5, hallucination control 7.5, sycophancy 8.0; weighted 0.5 / 0.3 / 0.2). Verified against company primary sources: Sunday resource table and NI 43-101 status [2]; San Rafael stage and historic Deep Gold resource [3][12]; Sunday stage [4]; ore purchase terms [9]. Provisional or secondary: market data, cash and share count [1][5]; U3O8 and V2O5 prices [6][7]; cost proxy, recoveries and capex from a peer PEA [11]; San Rafael grade, tonnage and ownership; stage factors, start dates and lives. San Rafael uses the conservative Deep Gold subset; the project-wide historic figures [13] would add about 59% to plausible San Rafael pounds. The project RAG JSON (merged 2026-01-30) predates the Q1-Q2 2026 results; no WUC entry was found in the portion retrieved.
