COMPANY

Deep Yellow Limited (ASX: DYL | OTCQX: DYLLF)

ANALYSIS DATE

October 14, 2026

METHOD

FGA Methodology 10/13/2026 (Durrett-inspired) and sum-of-the-parts (USD)

PREPARED BY

Robert Maxwell, Fifth Generation Advisers

CONFIDENTIAL | ALL FIGURES USD | INFORMATIONAL PURPOSES ONLY

Read the Conflicts of Interest and Important Disclosures before relying on this report.

Executive Summary

Deep Yellow is a pre-production uranium developer with Tumas (Namibia) and Mulga Rock (Western Australia). Tumas has no final investment decision (FID); the company targets Q4 2026, and first production would be roughly 2029 if that occurs. The provisional score is 6.4/10 (carried forward, not refreshed) and the general opinion is Hold (speculative).

Under the 10/13/2026 methodology, remaining initial capital is multiplied by the project stage factor. Illustrative SOTP values are US$0.934 / US$1.516 / US$3.458 per share at uranium of $85 / $100 / $150. With 100% of remaining capital deducted (required sensitivity, equal to the 10/9 report) they are US$0.674 / US$1.256 / US$3.198.[1] These are hypothetical outputs, not verified valuations or price targets.

Price (USD)	Enterprise value (market)	Durrett score	SOTP vs. price ($100, stage-weighted)	SOTP vs. price ($100, full capital)
$0.764	$632.9M	6.4 / 10	+98%	+64%

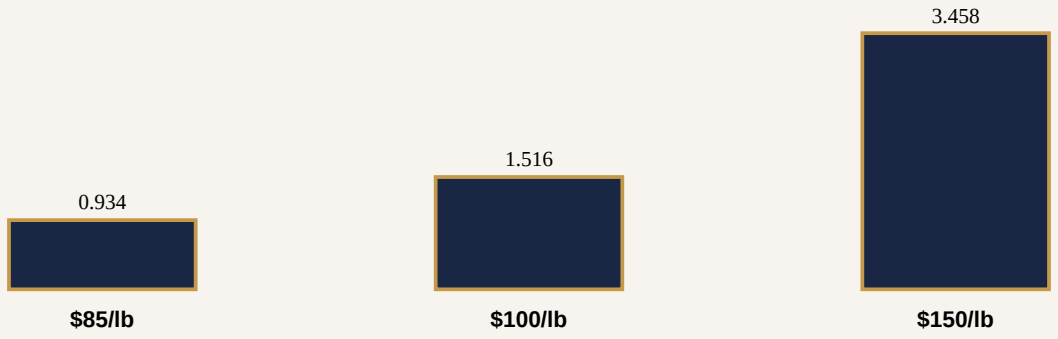

Price reference: DYLLF $0.764, October 7, 2026; not refreshed. Market EV = price x 974.202291M basic shares minus $111.392M June cash, assuming no debt. SOTP uses the 981.442249M diluted subtotal.

The change from the 10/9 report comes entirely from the capital treatment (about $255M less deducted capital PV at stage weights); no asset input changed. The increase should not be read as improved fundamentals.

Executive Summary Graphic Data

Flat uranium price, USD/lb	SOTP stage-weighted, USD/share	SOTP full capital, USD/share
85	0.934	0.674
100	1.516	1.256
150	3.458	3.198

Illustrative SOTP (stage-weighted capital), USD/share, by flat U3O8 price

Report Status and Key Limitations

General, impersonal working research; not personalized advice. Fully diluted securities, current costs, partner obligations and remaining capital require reconciliation. June cash is not October cash. Corporate overhead and unresolved liabilities are omitted. Adjusted capex is hypothetical, not a verified funding requirement. Material unmodeled resources (about 158 Mlb at Omahola and Alligator River) are excluded, which understates value; omitted overhead and the low 5% discount rate overstate it.

FGA clients do not own Deep Yellow shares or derivative positions as of October 9, 2026 (confirmation not refreshed for this revision). FGA is not compensated for this report. See full disclosures.

Project List and Asset Coverage

Project	Location	Company-reported resource	Treatment
Tumas	Namibia	Reserve 79.5 Mlb (model input)	Valued; 95% economic interest; stage 0.60
Mulga Rock	Western Australia	104.8 Mlb total resource; 42.3 Mlb reserve	Valued; 100%; stage 0.40; costs/timing assumed
Omahola	Namibia	125.4 Mlb at 190 ppm (company)	Identified, NOT modeled; no reserve (0.83 M&I weight would apply); M&I/inferred split, cost, timing needed
Alligator River / Angularli	Northern Territory	32.9 Mlb at 1.09% (company)	Identified, NOT modeled; same data gaps
S-Bend, Tinkas, Nova, other JVs	Namibia / Australia	Exploration	Unmodeled optionality; agreements to verify

Omahola and Alligator River total about 158 Mlb, roughly 37% of the company-reported 428.2 Mlb resource base. Their exclusion is a data limitation, not a view that they are worthless. Company-reported figures are unverified against technical reports.

Tumas Production Timeline and Catalysts

Tumas has no FID, so no production date is firm. Deep Yellow's board deferred plant construction in April 2025 until uranium prices improve. The company still targets an FID in Q4 2026, subject to market conditions. October 9, 2026 releases added a long-term NamWater water supply agreement and local-ownership (Oponona) agreements. A Canaccord/FNArena note (October 2026) describes a Q4 2026 FID as difficult. Engineering was 79% complete at fiscal year-end 2026; bulk earthworks are complete and civil/concrete contracts (about $34M) were awarded in September. The power supply agreement remains conditional on FID.

The company schedule gives wet commissioning within 24 months after FID, with first drums about 2 months after processing starts. An FID in Q4 2026 would imply first drums around 2029. Earlier guidance of early, mid- or 3Q 2027 production assumed an earlier FID and is stale. The model's 3.0-year start (about late 2029) is consistent with this but remains an assumption, not company guidance.

Catalyst	Status
FID	Targeted Q4 2026; not approved
Water (NamWater) and Oponona agreements	Signed (October 2026)
Power supply agreement	Conditional on FID
Plant construction and commissioning	About 24 months after FID
First production	Not guided; about 2029 if FID occurs in Q4 2026

Reserves, Resources and Plausible Value

Project	P&P Mlb	M&I inclusive Mlb	Inferred Mlb	Plausible Mlb	Attributable Mlb
Tumas model	79.5	102.1	16.1	91.070	86.5165
Mulga Rock model	42.3	64.4	40.4	64.555	64.555

Plausible = 0.9 x P&P + 0.65 x (M&I inclusive minus reserves) + 0.3 x inferred. The 0.83 no-reserve weight was NOT applied to any modeled project.

Tumas: 79.5 x 0.9 + (102.1 - 79.5) x 0.65 + 16.1 x 0.3 = 91.070 Mlb; x 95% = 86.5165 Mlb.

Mulga Rock: 42.3 x 0.9 + (64.4 - 42.3) x 0.65 + 40.4 x 0.3 = 64.555 Mlb. Source-checked M&I 64.3 / inferred 40.5 are not yet incorporated. "Plausible" pounds are not a regulatory category.

Fully Diluted Share Basis

Component	Count
Ordinary shares	974,202,291
Performance rights	7,151,069
Nil-exercise options	88,889
Retrieved subtotal	981,442,249

Not certified complete; October 9 shares/rights news requires reconciliation; avoid double counting vesting.

10-Factor Analysis - Provisional

Factor	Score
Properties	7
People	7
Share structure	4
Location	8
Growth	9
Buzz / chart	2
Costs / financing	6
Cash / debt	6
Low valuation	9
Upside	6
Total	64
Average	6.4 / 10

Factors below 6 (Share structure 4, Buzz/chart 2) are concerns. Scores were carried forward and not refreshed.

Valuation: Sum of the Parts

Operating NAV = Stage x sum[(L/N) x (P - 1.3 x AISC) / 1.05^(start + year index + 0.5)].

Enterprise value (SOTP) = operating NAVs minus stage-weighted PV of remaining initial capital. Equity = EV + cash. Per share uses 981.442249M.

Project	Attributable Mlb	Start years	Life years	AISC USD/lb	Stage
Tumas	86.5165	3.0	25	45	0.60
Mulga Rock	64.555	7.0	18	45 assumed	0.40

SOTP Valuation (cont.)

Capital Basis

USD millions	Amount / treatment
Tumas adjusted capital[1]	120.750
Tumas at 95% allocation	114.713
Tumas PV (full)	105.666
Tumas PV x 0.60	63.400
Mulga Rock assumed capital	475.000
Mulga Rock PV (full)	354.558
Mulga Rock PV x 0.40	141.823
Total capital PV deducted, stage-weighted	205.223
Total capital PV, full-capital sensitivity	460.224
Cash added	111.392

Tumas equal thirds at 0.7 / 1.7 / 2.7 years (retained from the prior report; the methodology default of two years would give 1.5 / 2.5 and change per-share value by about +0.001). Mulga Rock halves at 5.5 / 6.5 years.

USD M except per share	$85	$100	$150
Tumas operating NAV	686.460	1075.023	2370.231
Mulga Rock operating NAV	323.617	506.797	1117.396
SOTP enterprise value (stage-weighted capital)	804.855	1376.597	3282.404
Equity value (stage-weighted)	916.247	1487.989	3393.796
SOTP USD/share (stage-weighted)[1]	0.934	1.516	3.458
Equity value (full capital)	661.246	1232.988	3138.795
SOTP USD/share (full capital sensitivity)	0.674	1.256	3.198

Input Assumptions and Project Economics

Item	Basis / status
Prices / discount	$85 / $100 / $150 flat; 5% mid-year; 1.3x cost pad
FX	0.6962 USD/AUD, retained assumption
Tumas capital	US$120.75M client assumption[1]; not verified
Mulga Rock capital	US$475M assumption; not current company budget
Tumas AISC	$45 model input; study $44.52/lb real terms. Verify it excludes initial capital and income tax per methodology
Mulga Rock AISC	$45 assumed; redesigned economics unresolved
Tumas timetable	No FID yet; target Q4 2026 (subject to market). Wet commissioning within 24 months of FID. Model start 3.0 years (about late 2029) is an assumption
Tumas life	25 years modeled; company materials cite up to 30 years (unreconciled)
Cash	A$160M June 30, 2026

Other Assets and Funding

Cash included. Recheck old receivables before addition. Physical uranium and listed-equity holdings not verified (none added). Exploration and unmodeled projects excluded, not presumed worthless. Oponona funding may require cash above the 95% economic share; assess loan recoverability separately. Company coverage indicates funding for both projects is not yet adequate.

Capital Raise Outlook and History

No reduced real funding requirement is established. Stage-weighting lowers the modeled capital deduction but a project that proceeds bears the full capital; the full-capital sensitivity is the better guide to dilution risk.

Date / basis	Event	Status
October 9 news	Shares and rights; NamWater and Oponona agreements	Reconciliation pending
Historical register	Grants, vesting, cancellations	Incomplete
FY2027 illustration	Potential equity financing	Hypothetical; not completed

Sensitivities ($100 uranium)

Case	USD/share
Stage-weighted capital (base)	1.516
Full remaining capital	1.256
Methodology default Tumas capital timing	about 1.517
Tumas revenue start delayed 1 year (capital timing fixed)	1.464 (full capital: 1.204)
Tumas whole project delayed 1 year (capital also moves)	1.467 (full capital: 1.209)
Omahola / Alligator River	Not modeled; pending inputs
Corporate overhead, equity raise	Not yet run

Red Flags and Investor Concerns

Red Flag: No Tumas FID. Production is unscheduled; the Q4 2026 FID target depends on uranium prices and funding. Each year of delay lowers value by about $0.05/share in the model.

Red Flag: Capital assumption. US$120.75M is hypothetical; engineering completion is not capital paid.

Red Flag: Stage-weighted capital. Raises value by about $0.26/share versus full capital; not a probability.

Red Flag: Share Structure (4). Complete diluted securities reconciliation.

Red Flag: Buzz / Chart (2). Carried-forward score, not a refreshed market assessment.

Red Flag: Funding and partner obligations. Resolve Oponona, cost-to-complete, overhead, leases and reclamation.

Red Flag: Incomplete asset coverage. Omahola and Alligator River unmodeled; Mulga Rock classification and costs unverified.

Data Findings and Next Steps

- RAG JSON DYL records are stale: Tumas shows 100% ownership, 22-year life, $38.72 AISC and 64 Mlb M&I (Dec 2023 DFS); Mulga Rock and Omahola have no records; a Reptile record has no data. An updated JSON is recommended.
- Reconcile Tumas resource totals (company sources cite differing figures) and mine life.
- Obtain Omahola and Alligator River category splits, ownership, costs and timing; apply 0.83 to M&I if no reserve.
- Obtain cost-to-complete; update cash and securities; refresh price; track the Q4 2026 FID decision.

Data Quality Assessment

Scenario arithmetic reproduces the 10/9 results exactly under full capital. Input completeness remains unresolved. No numerical confidence score is asserted. Internal review, not independent assurance.

[1] Tumas capital basis: US$120.75M, a client-directed hypothetical assumption incorporating the requested 79% adjustment. NOT verified remaining capex. The 79% metric refers to engineering completion, not capital spent or construction completion. The 95% cost allocation and spending dates are assumptions; Oponona funding may require a different cash deduction.

Conflicts of Interest, Holdings and Compensation

Item	Approved disclosure
Compensation	Fifth Generation Advisers is not being compensated for this report by Deep Yellow, its officers, directors, affiliates, underwriters or financing agents, or any other party.
Firm and personnel positions	FGA, its principals and employees hold no direct or indirect long or short positions in DYL/DYLLF, including options, warrants or convertible securities.
Advisory client positions	As of October 9, 2026, FGA advisory clients do not own Deep Yellow shares and hold no options, warrants, convertible securities or other derivative positions in DYL/DYLLF.
Other business relationships	FGA has had no investment-banking, advisory, consulting, finder or other business relationship with Deep Yellow during the past 12 months.
Issuer participation	Deep Yellow did not review or provide input into this report.
Subscription fees	FGA does not charge subscription or access fees for this report.
Updates	FGA has no obligation to update this report. Any revision or withdrawal will be distributed to the original recipients by email.
General and impersonal	Not tailored to any recipient; any personalized advice is provided separately after a review of client circumstances and may differ from these views.
Third-party method	Don Durrett-inspired framework; the weights, scores and application are analytical judgments. No endorsement by Don Durrett is claimed.

Holdings, compensation and relationship disclosures are based on firm confirmation provided October 9, 2026 and were not re-confirmed for this October 14, 2026 revision. No analysis is free of bias; disclosed assumptions and judgments may influence conclusions.

Important Disclosures

Adviser status

Fifth Generation Advisers is described as a registered investment adviser. Registration does not imply a particular level of skill or training. The specific registration authority and Form ADV URL were not supplied for this export; no state-versus-SEC registration claim is made. Regulatory information may be obtained from FGA or reviewed at adviserinfo.sec.gov.

Compensation and independence

FGA receives no compensation for this report and charges no subscription or access fee. The issuer did not review or contribute to it. FGA, its principals, employees and advisory clients have no disclosed positions in DYL/DYLLF as set out above. No investment-banking, advisory, consulting, finder or other business relationship with Deep Yellow existed in the past 12 months. These facts do not guarantee freedom from analytical bias.

Nature of this report

General and impersonal, for informational purposes only. A general opinion on a security, not tailored to any individual. Not investment, tax or legal advice, an offer or solicitation to buy or sell securities, or an offer of advisory services. Quantitative analysis does not replace qualitative, fundamental or suitability review.

Scenarios are not forecasts

Per-share values, SOTP-versus-price percentages, sensitivities and financing judgments are hypothetical outputs, not targets, predictions or calibrated probabilities. Metal prices are held flat. The 5% discount and 1.3x cost pad are modeling choices. No assurance is given that any scenario will occur.

Model limitations

Tumas capital of US$120.75M is client-directed and hypothetical, not verified remaining capital. Engineering progress does not measure spend. Remaining capital is stage-weighted under the 10/13/2026 methodology, which lowers the deduction relative to full capital; a project that proceeds would bear the full capital. Timing, life, costs, funding and ownership treatments include assumptions; certain assets, overhead and unresolved obligations are omitted, including Omahola and Alligator River, which are identified but not modeled. The fully diluted subtotal is incomplete. Small changes can materially overstate or understate value. Outputs are not audited.

Mineral resource figures

Reserves/resources are estimates; inferred resources have low geological confidence and are speculative. Plausible pounds are our weighting, not a category recognized under NI 43-101 or SEC S-K 1300, and no qualified person has verified the weighting. Resources are not reserves and may lack demonstrated economic viability.

Sources and data

Reports, filings and secondary coverage may be incorrect or outdated. Not all information is independently verified. Assumed and provisional figures are disclosed. Cash and price references are historical rather than refreshed market values.

Principal risks

Substantial risk, including loss of all principal: commodity-price volatility; financing/dilution through shares, convertibles or ATM programs; permitting delay/denial, regulation, politics and litigation; operating failures, cost overruns and execution; thin liquidity and price gaps; cross-listing/currency; resource and recovery revisions; partner funding, rehabilitation and closure obligations.

No performance record

No FGA portfolio or account performance is shown. Historical prices and scenarios are not investment-return records. Past performance does not guarantee future results.

Updates and withdrawal

FGA has no obligation to update this report. Any revision or withdrawal will be emailed to original recipients. Opinions and inputs are dated and may change.

Distribution

Confidential, not for redistribution without written permission. Not directed to persons where distribution would be unlawful. Perform your own due diligence and consult a qualified professional. All figures are USD except identified A$ amounts translated at the disclosed rate.
