Company Review

Resource valuation, risk and investment thesis

COMPANY

Denison Mines Corp. | NYSE American: DNN

REPORT DATE

October 15, 2026

ECONOMIC REFERENCE DATE

October 8, 2026

PREPARED FOR

Fifth Generation Advisers | Internal review

PROVISIONAL RESEARCH • NOT CLEARED FOR EXTERNAL DISTRIBUTION

Read assumptions, source limitations and conflicts before relying on this report.

© 2026 Fifth Generation Advisers. All rights reserved.

Executive Summary

Illustrative values are **$3.72 / $4.47 / $7.27 per share** at flat uranium prices of $85 / $100 / $150. These are scenario outputs, not forecasts or price targets. The economic reference date is October 8, 2026. Financial inputs, share count and market price have not been refreshed to October 15.

$85 U3O8	$100 U3O8	$150 U3O8
$3.72	$4.47	$7.27

Provisional values; share treatment differs above the capped-call threshold. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Report status and key limitations

Release status: internal review. No current investment recommendation is issued. The 6.5/10 score is an October 8 reference. Primary-source cost decomposition, resource categories, full dilution and several balance-sheet items are unresolved.

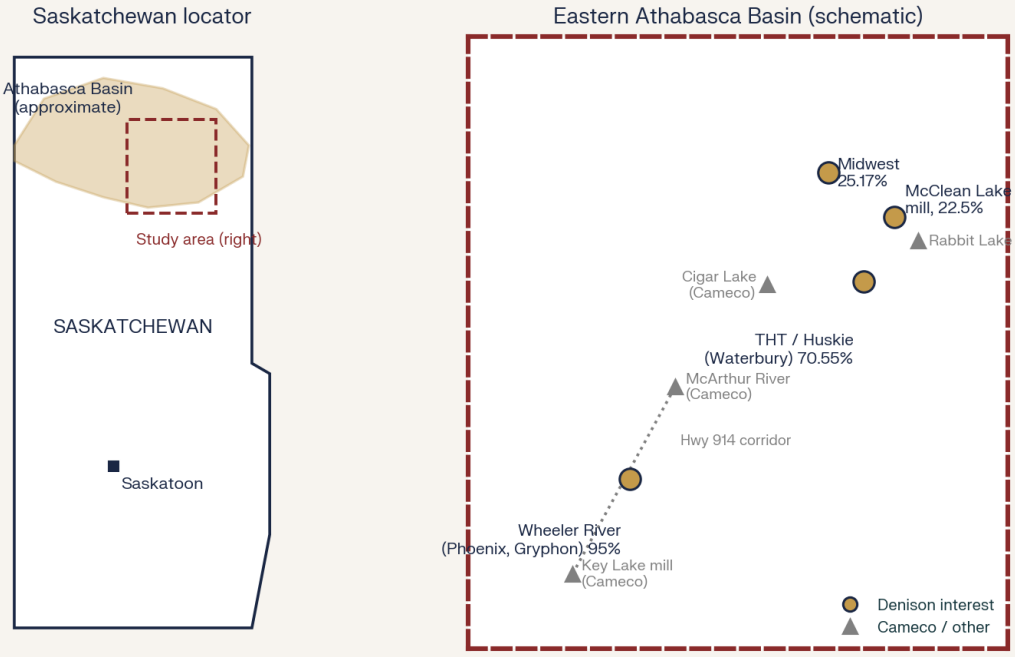

The 1.3× cost pad allows for income tax and uncertainty; it is not a statutory tax model. A 5% discount rate, simplified production and omission of overhead can materially increase value. The $150 scenario is an upside case, not inherently conservative.

Project List

Project	Interest	Stage / treatment
Phoenix, Saskatchewan	95%	Construction; factor 0.80
Gryphon, Saskatchewan	95%	PFS; factor 0.60
Midwest Main/A, Saskatchewan	25.17%	PEA; factor 0.40
McClean Lake	22.5%	Producing interest; not separately valued
Waterbury THT/Huskie	70.55%	Unmodeled optionality
Other JCU / Millennium interests	Verify	Unmodeled; not assumed worthless

Company ownership/status provenance: February/March 2026 releases and Wheeler River/Midwest disclosures. Current status not independently refreshed. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Resources and Project Locations

Schematic illustration; locations and outlines are approximate, not survey coordinates. Ownership labels are historical inputs. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Plausible resources

Project	P&P;	M&I; total	Inferred	Attributable plausible
Phoenix	56.7	70.5	1.1	57.313500
Gryphon	49.7	61.9	1.9	50.568500
Midwest	0.0	49.5	19.4	11.805988

Mlb U3O8, 100% basis before ownership. Phoenix inferred 1.1 Mlb and Midwest A resource inputs remain unverified. Plausible pounds are not a regulatory resource category. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Phoenix: [0.90×56.7 + 0.65×(70.5–56.7) + 0.30×1.1] × 0.95 = **57.313500 Mlb**.

Gryphon: [0.90×49.7 + 0.65×(61.9–49.7) + 0.30×1.9] × 0.95 = **50.568500 Mlb**.

Midwest: [0.83×49.5 + 0.30×19.4] × 0.2517 = **11.805989 Mlb**. No P&P; reserve is reported in the input set; 0.83 is a modeling weight, not recovery probability. Total: **119.687989 Mlb**.

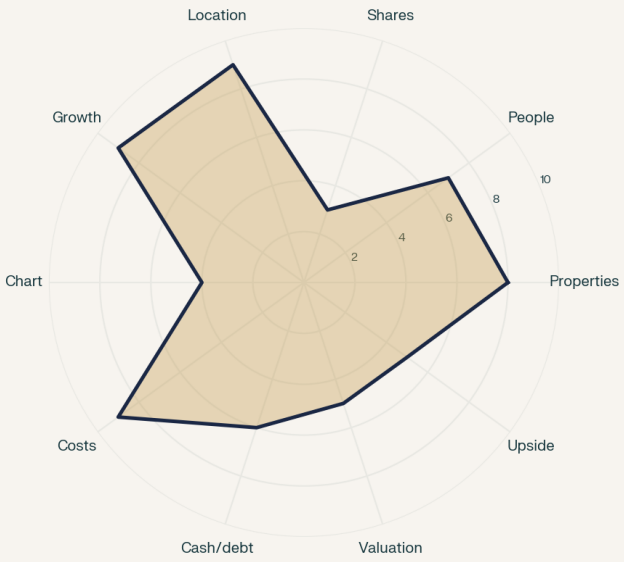

Midwest Main plus A resources use Main PEA economics: an assumed extension, not a technical-study valuation of both deposits. Subtracting recoverable reserves from contained resources is an approximation.

10-Factor Analysis

Scorecard as of October 8; not a current reassessment.

Factor	Score	Rationale / limitation
Properties	8	High-grade Athabasca assets; 95% Wheeler interest.
People	7	Execution assessment; insider ownership not refreshed.
Shares	3	Options/RSUs and convert reconciliation unresolved.
Location	9	Canada is Tier 1 jurisdiction, not automatic mine quality.
Growth	9	Phoenix growth depends on uncertain start dates.
Chart	4	Historical chart assessment, not a current trend claim.
Costs	9	AISC proxies require component-level verification.
Cash/debt	6	Liquidity and remaining capex need reconciliation.
Valuation	5	Scenario value is conditional on unresolved inputs.
Upside	5	High-price upside is not a forecast.
Average	6.5/10	Historical judgment; not a current rating.

Equal-weight factor scores. All scores are judgmental. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Factors below 6: Share Structure (3), Chart (4), Low Valuation (5), Upside (5). ISR scale-up is an additional execution concern. Internal data-quality scores are not independent assurance.

Valuation Inputs and Calculation

Project	Mlb attrib.	Delay / life	AISC proxy	Stage
Phoenix	57.313500	1.7 / 10	$10.581088	0.80
Gryphon	50.568500	5.5 / 6.5	$14.520168	0.60
Midwest	11.805988	5.5 / 6.14	$20.767864	0.40

Cost, timing and life inputs are historical study-derived proxies and assumptions, not newly verified estimates. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Costs: incomplete component reconciliation

Phoenix: 16.04 – 419.4/(56.7×1.355). Gryphon: 25.47 – 737.4/(49.7×1.355). Midwest: 25.78 – 254/(37.4×1.355). Cost-study FX: 1.355 CAD/USD. Initial capital is stripped out; exclusion of income tax and inclusion of royalties, sustaining capital and closure still need verification.

Operating value

Annual pounds = attributable plausible pounds / mine life. Cash flow = annual pounds × (scenario price – 1.30×AISC). Complete-year discount timing = start delay + year index + 0.5. Operating NAV = stage × sum of discounted cash flows. Gryphon's 0.5-year tail and Midwest's 0.14-year tail have proportional output and their own midpoint timing. No extra recovery or permitting probability is applied.

Future initial capital

Project	Budget proxy	Spend midpoints	Full PV	Stage PV
Phoenix	$438.000M	0.425 / 1.275	$420.297M	$336.238M
Gryphon	$511.387M	4 / 5	$410.702M	$246.421M
Midwest	$46.670M	4 / 5	$37.482M	$14.993M

Budgets split equally at the two dates. Full-capital sensitivity uses identical dates. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Gryphon/Midwest use start–1.5 and start–0.5 spending midpoints. Phoenix's 1.7-year delay would put default spending in the past: explicit prospective override splits 1.7 years into equal windows, midpoints 0.425 and 1.275. No past spending is deducted.

Phoenix's full $438M post-FID budget is a proxy, not verified remaining expenditure. 100% funding despite 95% economic ownership needs agreement review. Stage-weighted capital is a valuation adjustment, not the cash required to build.

Sum of the Parts

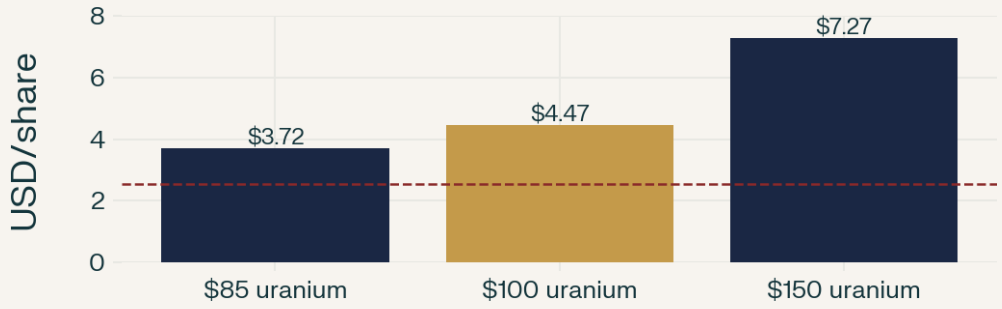

USD millions unless stated	$85	$100	$150
Phoenix operating NAV	2,379	2,880	4,549
Gryphon operating NAV	1,314	1,613	2,607
Midwest operating NAV	181	228	384
Operating NAV total	3,874	4,720	7,540
Less stage-weighted capital	(598)	(598)	(598)
Enterprise SOTP	3,277	4,123	6,942
Cash (provisional)	339	339	339
Less face debt	(345)	(345)	(345)
Uranium gross mark	93	110	164
Debt-case equity	3,364	4,227	7,101
Debt add-back on conversion	0	345	345
Selected equity numerator	3,364	4,572	7,446
Selected shares, millions	905.220	1,023.533	1,023.533
Scenario USD/share	3.72	4.47	7.27

Monetary totals rounded to nearest integer; per-share values to two decimals. Share counts remain in millions to three decimals. Totals use unrounded inputs; displayed rows may not sum exactly. Unresolved securities mean these are not fully reconciled diluted-share values. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Convertible bridge

Basic: 905.220000M shares. Conversion shares: 345,000 notes × 342.9355 / 1,000,000 = 118.312747500M. Debt-case value/share is tested against $4.32. At $85 retain $345M debt, no conversion shares. At $100/$150 remove debt and include all conversion shares; denominator 1023.532747500M.

Capped-call asset is not separately valued. No coupon is separately deducted from unlevered NAV. This simplified above-cap conversion treatment is not a full option-payoff valuation. Options, warrants, RSUs and PSUs need reconciliation.

Sensitivities and Balance Sheet

One change at a time; $100 uranium	USD/share
Base case	$4.47
100% of remaining capital deducted	$4.20
Midwest M&I; weight 0.65	$4.42
Phoenix operating NAV -15%	$4.19
All project AISC +20%	$4.29
Revenue delayed one year; capex fixed	$4.25
$10M/year corporate costs for ten years	$4.39
Add $62.05M provisional investments	$4.53
$200M equity raise at $2.56; no fees	$4.33

Per-share sensitivity values rounded to nearest hundredth. Each row retests debt versus conversion. Equity proceeds and shares are both added, without fees. These are assumptions, not forecasts. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Delay shifts receipts only; capital dates stay fixed. Overhead sensitivity deducts $10M annually for ten years at mid-year timing. No-reserve sensitivity resets only Midwest to 0.65. Full-capital sensitivity removes stage weighting from capital, not operating NAV.

Other assets and obligations

Item	Treatment / unresolved limitation
Uranium inventory	1,095,926 lb × scenario price; gross of costs/taxes. Book cost unverified.
Fixed-price commitments	Main mark ignores fixed price; alternative: 350,000 lb at $95.17, rest at scenario.
Cash	$339.45M (465 × 0.73); secondary approximation.
Short-term investments	Excluded; provisional $62.05M sensitivity only.
Other securities / JCU	Unreconciled; no invented market value.
Restricted cash / leases / reclamation	Unquantified, not presumed absent.
Corporate costs	Not deducted in base; can overstate equity.
Other property / mill / receivables	No separate value; avoid duplicating project economics.

No current balance-sheet refresh. Missing or excluded items are not automatically economically zero. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Contract-adjusted inventory differs from gross mark by +$3.5595M / –$1.6905M / –$19.1905M at $85/$100/$150. Inventory is already produced and is excluded from in-ground pounds.

Risks, Funding and Review Gates

ISR technology and execution

Commercial-scale freeze-wall integrity, permeability, sweep efficiency, recovery, reagent demand, neutralization and restoration remain key risks. Encouraging laboratory and field tests do not establish commercial production or costs. Lower recovery, higher costs or delay can reduce NAV. The –15% Phoenix operating-NAV sensitivity is illustrative, not a failure probability.

Capital raise outlook and history

The earlier 40% raise probability is not recalibrated or endorsed here. A current 18-month assessment needs current liquidity, sales commitments, remaining spending and obligations. Stage-weighted capital must not be used to claim the build is fully funded.

Event	USD size	Potential shares / status
August 2025 convertible notes	$345M	118.312748M potential shares; not already issued
Financing terms	4.25%, due 2031	About $2.92 conversion price; $4.32 capped-call cap
ATM / other issues	Not reconciled	No invented cumulative dilution total

Financing provenance: August 2025 issuer note announcements. Conversion shares are potential, not issued. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Release gates and data quality

Verify (1) Phoenix inferred and Midwest A resources; (2) AISC components excluding tax and initial capital; (3) cash, investments and obligations; (4) all dilutive securities and capped calls; (5) remaining capital and start dates; (6) conflicts and compensation declarations.

No numerical Data Quality Score is assigned. Unresolved primary inputs preclude an assurance claim. The prior 7.75 score was an internal self-assessment, not independent audit assurance. Calculations are conditional, not a fully verified valuation.

Sources, Conflicts and Disclosures

Underlying source provenance

Technical and financial inputs derive from previously collected company disclosures and secondary data. Original issuer documents have not been independently re-fetched for this report. Source dates do not imply current input verification.

Source	Data provenance / limitations
Wheeler River 2023 study summary	Phoenix reserves, mine life, cost and capital inputs; original 2023 study-cost basis.
Gryphon PFS cost update	Resource/reserve categories, capital and all-in cost inputs; mine life remains provisional.
Midwest PEA, August 6, 2025	Main resource and project economics; extension to Midwest A is an assumption.
Phoenix January 2026 budget disclosure	Full post-FID budget proxy, not verified remaining expenditure.
August 2025 convertible announcements	Face principal, initial conversion terms and capped-call cap.
2026 company disclosures / secondary market data	Ownership, inventory, cash approximation and share reference; current balance-sheet/share reconciliation unresolved.

These descriptions retain source provenance without citing internal report, template or calculation files. Exact primary tables are still required before release. All monetary figures USD; source CAD translated at 0.73 unless study FX is stated.

Method adapted from How to Invest In Gold and Silver - D. Durrett: https://a.co/d/01XVxUfE. Uranium-specific adjustments are FGA's application, not an endorsement by Don Durrett.

Conflicts of interest, holdings and compensation

Issuer/third-party compensation, firm/principal/employee/client positions, issuer relationships, trading restrictions and update/distribution policy have not been supplied. Adviser must complete before external distribution. No claim of no positions or no compensation is made on the adviser's behalf.

Important disclosures

Fifth Generation Advisers primarily focuses on quantitative analysis of stocks and securities. This general, impersonal report is informational, not personalized investment, tax or legal advice or an offer/solicitation. Inputs derive from company reports, audited statements and technical reports where available; secondary, estimated and assumed inputs are identified. Technical reports are not automatically audited financial statements. Model outputs are not audited. Do your own due diligence and consult a qualified professional. Resources are not reserves; plausible pounds are not a regulatory category. Scenarios are not targets or forecasts. Mining securities can lose all principal. Registration does not imply particular skill or training.
