Executive Summary

enCore Energy is a U.S. uranium in-situ recovery (ISR) operator with a development pipeline in Texas, South Dakota and Wyoming. The modeled portfolio includes Alta Mesa, Mesteña Grande, Dewey-Burdock and the ISR portion of Gas Hills. The analysis uses 70% economic ownership for Alta Mesa and Mesteña Grande and 100% for Dewey-Burdock and Gas Hills. [S1][S2][S3][S7]

The sum-of-the-parts illustration gives **$1.05, $1.73 and $4.00 per share** at flat U3O8 prices of $85, $100 and $150 per pound. The model applies a 0.83 M&I weight where no proven and probable reserve is reported, a 0.30 inferred weight, a 1.3× cost pad, 5% mid-year discounting, stage-weighted capital and 207.257939M gross diluted shares. [M1]

These are provisional values for a modeled asset subset, not verified whole-company fair values or price targets. Remaining capital, cost components, current balances, retained investments, some liabilities and post-August share movements are incompletely reconciled. Both excluded positive assets and excluded obligations may be material; the illustration is not a reliable valuation floor.

METRIC	RESULT / BASIS
Flat uranium scenarios	$85 / $100 / $150 per lb; client-selected, not forecasts
Illustrative value per share	$1.05 / $1.73 / $4.00
Full-capital value per share	$0.54 / $1.22 / $3.49
Modeled attributable plausible pounds	26.459691 Mlb U3O8
Share denominator	207.257939M; company-reported gross diluted snapshot at August 28, 2026
Reference ten-factor score	6.1/10; not independently revalidated against all current valuation inputs
Current price / market cap / upside	Not presented: contemporaneous price and subsequent issuance not verified
Investment recommendation	No current recommendation issued

The U.S. is treated as a Tier 1 jurisdiction, while enCore's assets are classified as Tier 3 under FGA's analytical framework. Jurisdiction and asset quality are distinct judgments, not formal resource categories. [M1]

Operational execution is a central risk. First-half 2026 extraction was 131,274 lb versus 317,613 lb a year earlier, with extraction costs of $57.36/lb. These company measures differ from technical-study AISC and should not be substituted mechanically into the valuation. [S12]

Project List

PROJECT	LOCATION	ECONOMIC OWNERSHIP USED	STATUS / VALUATION TREATMENT
Alta Mesa	Texas, USA	70%	Producing ISR; modeled using stated cost and schedule assumptions
Mesteña Grande	Texas, USA	70%	Exploration-stage / initial-assessment economics; inferred resources
Dewey-Burdock	South Dakota, USA	100%	Development pipeline; stage factor 0.60 is an explicit analyst override
Gas Hills — ISR subset	Wyoming, USA	100%	PEA / initial-assessment project; stage factor 0.40
Juniper Ridge	Wyoming, USA	100%	Historical conventional-project resource; no NAV assigned
South Texas Integrated Projects	Texas, USA	100%	Separately disclosed resources; incremental economics not modeled
Rosita CPP / Alta Mesa East optionality	Texas, USA	Project-specific	No separate speculative value added; plant support and exploration not double-counted

Ownership and project/resource boundaries: [S1]–[S5][S7]. Project stages, start delays and valuation exclusions are analytical assumptions, not calibrated probabilities. Project locations span South Texas, South Dakota and Wyoming; no project-location map is included.

Mineral Resources and Plausible Pounds

Mineral resources are not mineral reserves. Inferred estimates do not establish economic mineability. No proven and probable reserve pounds enter the modeled rows below. The 0.83 no-reserve M&I weight and 0.30 inferred weight are applied with economic ownership. The 0.83 factor is a valuation choice, not an 83% physical-recovery forecast. [M1]

PROJECT	P&P USED	M&I Mlb, 100%	INFERRED Mlb, 100%	OWNERSHIP	PLAUSIBLE Mlb, 100%	ATTRIBUTABLE Mlb	NAV INCLUDED
Alta Mesa	None	2.585900	5.200500	70%	3.706447	2.594513	Yes
Mesteña Grande	None	0	13.887900	70%	4.166370	2.916459	Yes
Dewey-Burdock	None	17.122147	0.712624	100%	14.425169	14.425169	Yes
Gas Hills ISR	None	7.705000	0.428000	100%	6.523550	6.523550	Yes
Modeled subtotal						**26.459691**	
Juniper Ridge — historical	None	6.010000	0.180000	100%	5.042300	5.042300	No
South Texas Integrated	None	3.527000	0.308000	100%	3.019810	3.019810	No

Sources: Alta Mesa, Mesteña, Gas Hills and South Texas [S1][S2]; Dewey-Burdock [S7]; Juniper Ridge [S5]. Only the four modeled projects enter the subtotal. This is not a depleted company-wide resource statement. Historical resources shown for context are not automatically eligible for a current economic model.

Estimate dates and resource boundaries

- Texas and Gas Hills estimates disclosed in February 2025 are effective December 31, 2024. Subsequent extraction and any amended estimates have not been fully reconciled; these should not be interpreted as October 2026 depleted resources. [S1]
- Mesteña Grande's 13.8879 Mlb is entirely inferred. Its valuation receives no contribution from M&I weighting. [S1][S2]
- Gas Hills' 7.705 Mlb M&I and 0.428 Mlb inferred are the ISR subset. The 6.164 Mlb estimated-recovery figure is not an in-ground M&I resource. [S1][S4]
- Gas Hills also discloses 3.059 Mlb non-ISR M&I and 0.062 Mlb non-ISR inferred, excluded here. Combined project resources must not all be valued with ISR costs. [S1]
- Juniper Ridge is a historical estimate referencing a 2017 report. The stated cost and remaining-capital support are insufficient for a current NAV; it is disclosed without assigned value. [S5]
- South Texas Integrated resources relate to the integrated project areas. The Rosita processing facility is not assigned an additional standalone resource value, avoiding duplication. [S1]

Published project duration can include construction and restoration. Seven production cash-flow years at Gas Hills and fourteen at Dewey-Burdock are model assumptions, not claims that total project life equals production life. [S4][S7]

Ten-Factor Analysis — Reference Assessment

The scores below provide the reference analytical assessment. They sum to 61, or 6.1/10. They have not been independently re-scored to reflect every current valuation input; the total is not a newly validated investment rating. Methodology and factor definitions follow the Don Durrett-inspired framework. [M1]

FACTOR	REFERENCE SCORE	RATING	SUPPORTING CONTEXT / LIMITATION
Properties / Ownership	4	Weak	Tier 3 asset assessment in a Tier 1 jurisdiction; economic ownership and resource categories are central to the valuation
People / Management	5	Fair	Management changes and extraction performance warrant continued scrutiny
Share Structure	6	Fair	Gross diluted snapshot includes options, RSUs and PSUs; later issuance remains unresolved
Location	9	Excellent	U.S. jurisdiction; permitting advances do not eliminate project conditions
Projected Growth	8	Strong	Multi-project pipeline; timing depends on permits, financing and sustained operations
Good Buzz / Chart	4	Weak	No current chart or post-distribution market-price conclusion is asserted
Cost / Financing	8	Strong	Study-margin potential is offset by unresolved cost components and operating performance
Cash / Debt	4	Weak	June cash $21.8M versus $115M note principal; subsequent cash burn and balances remain unresolved

FACTOR	REFERENCE SCORE	RATING	SUPPORTING CONTEXT / LIMITATION
Low Valuation Estimate	7	Good	No current market-price-relative valuation conclusion is asserted
Upside Potential	6	Fair	Scenario values are presented without a current-price upside multiple
Total / average	**61 / 6.1**		**Reference assessment, not independently revalidated**

Richard H. Little replaced Robert Willette as CEO and William M. Sheriff returned as Executive Chair effective April 20, 2026. No misconduct or accounting deficiency is inferred from these changes. [S15]

Fully Diluted Share Reconciliation

SECURITY	COMPANY COUNT, AUGUST 28, 2026
Issued ordinary shares	194,283,316
Options	7,709,499
Restricted stock units	4,382,992
Performance share units	882,132
Company-reported fully diluted total	**207,257,939**

Source [S6]. This is a gross potential-share count, not the accounting diluted weighted-average EPS denominator. No option exercise proceeds are credited. Subsequent ATM issuance, exercises, grants, vesting and forfeitures have not been reconciled. It is not certified as the current October 15 capital structure.

Convertible notes and capped call

The notes are modeled as debt at $115M face value; conversion shares are not simultaneously included. Original terms were 5.50%, due August 15, 2030, an approximately $3.2895 initial conversion price and an approximately $4.52 capped-call cap. [S9][S10]

Under the stated methodology, the displayed scenarios retain debt treatment while the provisional per-share result remains below the original capped-call cap; the $150 case is approximately $4.00. The cap, hedge coverage, settlement terms and conversion-rate adjustments following the Verdera distribution remain to be reconciled. The original cap alone does not prove zero economic dilution in every future case. A higher-value or adjusted-terms scenario requires a fresh conversion/hedge calculation. No capped-call asset is separately added and no convertible coupon is separately deducted in the unlevered NAV. [M1][S8][S10]

Valuation Method and Assumptions

For each project, operating NAV is the stage factor multiplied by the sum of discounted annual margins. Annual margin is attributable plausible pounds divided by production years, multiplied by uranium price less 1.30 times the stated cost input. Cash-flow times are start delay plus production-year number minus 0.5, discounted at 5%.

Enterprise value = modeled operating NAV − stage-weighted attributable capital PV.

Equity value = enterprise value + included cash + included securities + marked inventory − note principal.

Value per share = equity value / 207.257939M.

PROJECT	ATTRIBUTABLE MIb	START DELAY, YEARS	PRODUCTION YEARS	COST INPUT $/lb	PADDED COST	STAGE
Alta Mesa	2.594513	0.5	21	36.42	47.346	1.00
Mesteña Grande	2.916459	3	9	29.39	38.207	0.40
Dewey-Burdock	14.425169	4	14	35.01	45.513	0.60
Gas Hills ISR	6.523550	6	7	30.93	40.209	0.40

Start delays, equal annual production and production-year counts are analyst assumptions, not verified construction or mine schedules. Alta Mesa is already producing; its 0.5-year delay is a model convention, not its initial production date. The cost proxies are not all reconciled as comprehensive current AISC.

Cost basis and remaining-capital limitations

- Alta Mesa: the company release gives operating cost of $27.44/lb, ad valorem tax of $0.30 and royalty of $2.61, totaling $30.35 before income tax and separately treated capital. The model uses a $36.42 cost proxy, not a newly verified current AISC. The $25.9M capital budget comprises $2.5M plant refurbishment and $23.4M wellfield development; spent versus remaining costs and inclusion in the cost proxy are unresolved. [S1]
- Mesteña: $25.49 operating + $0.30 ad valorem + $3.60 royalty = $29.39/lb. This operating subtotal is not automatically comprehensive AISC. The $108.1M capital budget includes $94.4M wellfield development and $13.7M facilities. Treating the full budget as remaining pre-production spending is a model simplification, not a verified schedule. Economic ownership of 70% applies to pounds and capital. [S1][S2]
- Gas Hills: the $40.61/lb pre-income-tax headline includes capital and cannot simply replace $30.93 while the same capital is deducted separately. The model's cost-component bridge remains unresolved. Published initial capital is $55.2M. [S1][S4]
- Dewey-Burdock: the capital assumption uses $105M of early spending within a $264.2M total budget. The allocation of later wellfield spending to the $35.01/lb cost proxy remains unresolved; the operating-cost and capital treatment is not independently certified. [S18]
- Juniper Ridge: no NAV is assigned without sufficient cost and capital support.

The 1.3× pad includes a tax provision but is not a statutory tax calculation. Confidence weights, including 0.83, are not physical recoveries. Costs on produced pounds and resources on contained pounds require a separate recovery/mine-plan reconciliation. This simplified model is not equivalent to a technical-study NPV.

Attributable capital deductions

PROJECT	UNWEIGHTED ATTRIBUTABLE CAPITAL PV, $M	STAGE	WEIGHTED PV, $M
Alta Mesa	17.30	1.00	17.30
Mesteña Grande	70.35	0.40	28.14
Dewey-Burdock	93.00	0.60	55.80
Gas Hills	44.30	0.40	17.72
Total	**224.95**		**118.96**

The PVs are analyst assumptions based on stated budgets and approximate schedules, not verified remaining-spend statements. Mesteña's $70.35M attributable PV equals $100.5M at the 100%-project level multiplied by 70%. Alta Mesa's $17.3M is already ownership-adjusted. A two-year pre-start capital window is used as a simplifying convention; producing-project spending requires an explicit schedule. Stage factors are valuation haircuts, not probabilities; a proceeding project incurs full costs. Already-spent amounts and sustaining costs included in AISC must not be deducted again. [M1]

Sum of the Parts — Modeled Asset Subset

USD MILLIONS EXCEPT PER SHARE	$85	$100	$150
Alta Mesa operating NAV	59.6	83.4	162.6
Mesteña Grande operating NAV	38.2	50.4	91.2
Dewey-Burdock operating NAV	203.7	281.1	539.0
Gas Hills operating NAV	73.9	98.6	181.1
Operating NAV subtotal	375.4	513.5	973.9
Less: Alta Mesa capital PV	(17.3)	(17.3)	(17.3)
Less: Mesteña stage-weighted capital PV	(28.1)	(28.1)	(28.1)
Less: Dewey-Burdock stage-weighted capital PV	(55.8)	(55.8)	(55.8)
Less: Gas Hills stage-weighted capital PV	(17.7)	(17.7)	(17.7)
Modeled-subset enterprise value	256.4	394.5	854.9
Plus: June unrestricted cash	21.8	21.8	21.8
Plus: June securities excluding all June Verdera value	37.3	37.3	37.3
Plus: inventory at scenario price	17.3	20.3	30.5
Less: convertible principal	(115.0)	(115.0)	(115.0)
Illustrative modeled equity value	217.8	359.0	829.5
Gross diluted shares, millions	207.257939	207.257939	207.257939
Illustrative per share	**$1.05**	**$1.73**	**$4.00**

Calculations use unrounded resources and $17.72M Gas Hills weighted capital PV. Rounded rows may not add exactly to displayed totals. These are provisional modeled-subset values, not company-wide fair values or a reliable floor.

Balance-sheet scope and excluded assets

June cash of $21.8M, securities of $52.2M and inventory of 203,304 lb at $70.81/lb are dated company figures, not October balances. [S12]

The included $37.3M securities amount equals $52.2M less all $14.9M of June Verdera value. enCore distributed 35M Verdera shares on September 30 but retained 15,029,332 shares. The retained interest is an unvalued positive asset, not assumed absent. Its market price, currency and restrictions, and the value of other securities, have not been refreshed for this illustration. [S8][S12]

Inventory is marked gross at scenario prices, excluding selling costs, taxes and potential fixed-price contract effects. Produced inventory is not included in in-ground pounds. Receivables, payables, leases, reclamation, partner funding, restricted cash, hard assets and other obligations are not completely reconciled. Corporate overhead and post-June cash burn are not deducted in the central illustration.

South Texas Integrated, Juniper Ridge, Gas Hills non-ISR resources and unquantified exploration optionality receive no separate NAV. Excluded assets may have value; omitted obligations and overhead may reduce equity value. The net direction of this incomplete bridge is not established.

Sensitivities — $100 Uranium

CASE	VALUE PER SHARE	ASSUMPTION
Central modeled subset	$1.73	0.83 no-reserve M&I; stage-weighted capital
Full retained capital PV	$1.22	Deduct $224.95M rather than $118.96M
0.65 M&I sensitivity	$1.29	Same resources, ownership and other inputs
Dewey-Burdock operating NAV 50% lower	$1.05	Capital unchanged; stress test, not permitting forecast
Stage-weighted capital PV 25% higher	$1.59	Cost stress
Non-producing projects and capital one year later	$1.66	Shift Mesteña, Dewey-Burdock and Gas Hills together; Alta Mesa unchanged
Spot-purchase stress	$1.49	360,000 lb/quarter for four quarters; $100 purchase and assumed $65 sale price
Additional overhead $10M/year for 14 years	$1.24	Illustrative assumption, not guidance; 5% mid-year discounting

The spot-purchase stress subtracts $50.4M once from modeled equity, undiscounted. It is an additive analyst stress, not a verified contract-book forecast. The $65 sale price and assumed repeated volume are hypothetical. One quarter costs $12.6M, approximately $0.061/share. The same loss must not be deducted again if already included in a detailed operating model. The cited 360,000 lb operating-purchase volume requires primary contract/purchase reconciliation.

No equity-raise sensitivity is calculated from an unverified stock price. Any such sensitivity must add net proceeds and new shares consistently. No analyst-consensus target is asserted.

Three-price capital and resource-weight comparison

URANIUM SCENARIO	STAGE-WEIGHTED CAPITAL	FULL RETAINED CAPITAL PV	0.65 M&I, WEIGHTED CAPITAL
$85/lb	$1.05	$0.54	$0.73
$100/lb	$1.73	$1.22	$1.29
$150/lb	$4.00	$3.49	$3.16

Operating Results and Red Flags

> **Red Flag — Execution:** H1 extraction was 131,274 lb versus 317,613 lb, with $57.36/lb extraction costs. Delivered uranium cost was $75.54/lb against $70.10/lb realized sales, including purchased uranium in delivered costs. These measures differ from modeled AISC and are not interchangeable. [S12]

Red Flag — Management: Richard Little became CEO and William Sheriff returned as Executive Chair on April 20, 2026. Operating performance remains a key assessment criterion. No misconduct or accounting deficiency is inferred from the management changes. [S15]

Red Flag — Liquidity and dilution: The $250M ATM is equity-sale capacity, not cash received, committed credit or shares already issued. June cash is dated; subsequent usage, issuance and cash burn remain unresolved. [S12][S16]

Red Flag — Permitting: BLM authorization and NRC renewal represent material progress at Dewey-Burdock. Remaining state conditions, financing and construction readiness still require official verification; these developments do not establish that every approval is complete. [S13][S14]

Red Flag — Cost and capital: Wellfield spending may be misallocated between operating-cost proxies and separate capital. Remaining-spend schedules and cost components are not fully reconciled. Duplicate deductions would understate value; omitted costs would overstate it.

Red Flag — Valuation: The $100 modeled subset is $1.73 with weighted capital and $1.22 with full retained capital. Excluded assets and liabilities pull in opposite directions. The 0.83 resource factor increases value but does not establish better geology, recovery or economic feasibility.

Red Flag — Scorecard limitations: Sub-6 reference scores are Properties 4, People 5, Buzz 4 and Cash/Debt 4. Share Structure 6 is not below 6. The reference assessment has not been independently revalidated against all current model inputs.

Capital Raise Outlook and History

The August 13, 2026 ATM authorizes up to $250M of sales at prevailing market prices. Announced uses include acquisitions, strategic growth and general corporate purposes. Actual proceeds and shares issued have not been reconciled. Program capacity must not be treated as cash, a committed credit facility or an executed equity raise. [S16]

Financing risk reflects dated liquidity, development spending, operating performance and potential dilution. No calibrated probability of a meaningful or forced raise is asserted, and no ATM-to-current-market-cap ratio is quoted without a verified current price and share count.

DATE	EVENT	AMOUNT / STRUCTURE	CLASSIFICATION / LIMITATION
Aug 13, 2026	ATM program	Up to US$250M	Authorized capacity; actual proceeds and issuance unresolved [S16]
Aug 22, 2025	Convertible notes	US$115M, 5.50%, due 2030	Debt financing; approximately 35M potential original conversion shares, not issued equity [S9][S10]

DATE	EVENT	AMOUNT / STRUCTURE	CLASSIFICATION / LIMITATION
Feb 2024	Boss project-interest transaction	US$60M for a 30% interest, as reported in supporting analysis	Asset/JV transaction, not ordinary-share dilution; date and cash bridge not independently reverified
Feb 8, 2023	Public offering of units	C$34.5M; 10,615,650 units at C$3.25	Company closing release; full potential dilution requires warrant and split reconciliation [S17]
Mar 25, 2022	Bought-deal public offering	C$30M, as reported in supporting analysis	Date and detailed terms not independently reverified

This is a partial financing history, not an audited proceeds or dilution schedule. Canadian-dollar proceeds are not translated using an assumed exchange rate. Missing ATM sales information does not mean zero sales; missing pre-event shares prevents a reliable dilution percentage. The two historical transaction entries lacking independent re-verification are included for context and do not alter the valuation.

Input Assumptions and Limitations

INPUT	BASIS / LIMITATION
Uranium prices	Flat $85 / $100 / $150; client scenarios, not forecasts
Discount / cost pad	5% mid-year / 1.3×; includes a tax provision
Resource weighting	No-reserve M&I 0.83; inferred 0.30 applied to modeled rows
Reserve-bearing project convention	P&P 0.90; M&I excluding reserves 0.65; inferred 0.30; no double subtraction when resources are explicitly exclusive
Capital	Same stage factor as operating NAV; remaining-spend PVs provisional; full-capital sensitivity shown
Shares	Gross 207.257939M dated August 28; later activity unresolved
Balance sheet	June cash, securities and inventory; not current October balances
Costs and production profile	Stated proxies, equal annual cash flows and assumed starts/lives; not a fully reconciled technical schedule
Current market comparison / recommendation	Not presented

The material evidence gaps are depleted resources, phased attributable capital, current cost components, post-August shares and note/hedge adjustments, inventory commitments, retained investments, other liabilities, overhead, current price and factor-score validation. These are analytical limitations, not implied absences of assets or obligations.

Data Quality

No numeric data-quality score is assigned. Dated resource disclosures, company share structure, original note terms, dated liquidity and the Verdera distribution support identified inputs. They do not establish that all inputs are current or complete.

The scorecard is presented as a reference assessment rather than a newly validated rating. The model's resource weights, stage factors, cost proxies and start dates are analyst choices. Company data and model assumptions remain distinct. Updating a resource-weight factor does not refresh the underlying technical estimate or independently verify company performance.

Primary-source checks underlying this analysis were completed during the research process; the document does not certify that no subsequent amendment exists. Publication dates, estimate effective dates, balance-sheet dates and share-count dates are distinct. Neither a research database record nor a changed update timestamp makes an old technical estimate current.

Conflicts of Interest, Holdings and Compensation

The following are preparer representations requiring confirmation, not independently verified statements:

ITEM	DISCLOSURE / CONFIRMATION STATUS
Compensation	FGA states it receives no compensation to/from enCore, affiliates, agents or third parties in connection with this analysis; confirmation outstanding
Independence	Prepared from public information without issuer review/input; assumptions and judgment may introduce bias
Positions	Aggregate positions were stated to be fewer than 100,000 shares as of Oct 13, 2026; confirmation outstanding, and share count alone does not establish immateriality
Other relationships	FGA states no investment-banking, advisory, consulting, finder or other relationship currently or during the preceding twelve months; confirmation outstanding
General and impersonal	Not tailored to a recipient; not personalized advice
Third-party method	No affiliation with, endorsement by or compensation from Don Durrett is represented by the analysis

Firm registration details and the Form ADV URL remain unconfirmed. Registration, if applicable, does not imply a particular level of skill or training.

Some source checks were carried forward from the research process rather than newly retrieved at publication. Historical financing entries specifically marked unverified are contextual and are not represented as independently confirmed company disclosures.

Important Disclosures

This report is general and impersonal, for informational purposes only. It is not personalized investment, tax or legal advice, an offer or solicitation. No current investment recommendation is issued. The 6.1/10 reference score is not independently revalidated against all valuation inputs.

Mineral resources are not mineral reserves. Inferred resources may not be upgraded or become economic. Plausible pounds are an analytical construct, not S-K 1300 or NI 43-101 resource categories or statistically validated recovery probabilities. The 0.83 M&I factor is not an 83% recovery or development-success forecast. Stage factors are valuation adjustments, not calibrated success probabilities.

Scenario results are hypothetical, not forecasts, engineering-study NPVs or predictions of market prices. They depend on costs, capital, recoveries, timing, contracts, permitting, financing and omitted balances. The 5% rate, simplified production profile and excluded overhead can increase values; resource and stage haircuts do not establish that every scenario is conservative. Excluded assets and obligations mean this modeled subset is neither complete company value nor a demonstrated floor.

Material risks include commodity prices, operations, financing and dilution, regulation, politics, tax, liquidity, currency and estimation uncertainty. Loss of all principal is possible. Past performance does not guarantee future results. Registration does not imply a particular level of skill or training; registration details and preparer conflict statements remain subject to confirmation.
