Read the Conflicts of Interest and Important Disclosures sections before relying on this report.

Executive Summary

Global Atomic is a Niger-jurisdiction (high-risk) uranium developer building Dasa, a high-grade underground mine (80% owned through SOMIDA), and holds 49% of a producing Turkish zinc-recycling JV [1][2]. Commissioning is scheduled for H2 2028, and the remaining project cost is US$550.1M, of which US$433.5M is direct capital [1][3]. The Durrett 10-factor score is **4.6 / 10**.

Our sum of the parts (1.3x AISC, 0.80 development-and-construction stage factor applied to operating NAV and remaining initial capital, 8% discount rate, gross fully diluted shares) gives **$0.86, $1.23 and $2.43 per share** at U3O8 of $85, $100 and $150, against a price near **$0.24** [5]. The $100 base case sits above the analyst average target of about US$1.06 (C$1.50, five analysts, secondary source) [6]. The main drags are: (1) a funding gap, with about US$59M of pro forma cash against a US$152.7M equity requirement before the DFC loan can be drawn [3]; (2) Niger sovereign and export-route risk; (3) heavy dilution, with 958.8M gross fully diluted shares and DFC warrants not yet counted [3][4].

$0.24	~$145M	4.6 / 10	+411%
PRICE (USD) [5]	MARKET CAP [5][7]	DURRETT SCORE	SOTP UPSIDE (BASE)

Recommendation: Avoid for core portfolios. The asset is real and cheap on modeled value, but financing, dilution and Niger risk could impair it; any exposure is a small, sized-to-lose speculation. Data Quality Score and audit details are available on request.

Market cap = $0.24 x 604.2M basic shares (490.3M at Aug 13, 2026 [7] plus 113.9M sold Oct 1, 2026 [4]); about $230M on 958.8M gross fully diluted shares. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD. Period-end C$1.42 per US$ [7]; GLATF/GLO quote ratio about 0.706 [5].

Project List

PROJECT	LOCATION	OWNERSHIP	STATUS
Dasa (underground, acid-leach mill)	Agadez Region, Niger	80% (SOMIDA; Niger holds 20%)	Construction; commissioning H2 2028 [1][3]
Befesa Silvermet Turkey (zinc EAFD recycling)	Iskenderun, Turkiye	49% (equity JV)	Producing; US$3.9M dividends YTD 2026 [7]
Tin Negouran 1-4, Adrar Emoles 4	Niger	Permits	Exploration; not valued [2]

Table 1. Niger holds 10% free-carried plus 10% paid; Global Atomic has funded Niger's paid share (US$22.2M plus interest, recoverable) [7]. Sources: [1][2][3][7]. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Report Status and Key Limitations

- **General and impersonal.** This report is a general publication. It is not tailored to the objectives, financial situation or needs of any person, and it is not personalized advice.
- **Rating.** Avoid is Fifth Generation Advisers' general opinion on this security over the next 12 months, as of the analysis date. It is not a recommendation that any reader buy, hold or sell.
- **Scenarios, not forecasts.** Per-share values and the SOTP upside figure are illustrative outputs at flat uranium prices of $85, $100 and $150. They are not price targets, predictions or probabilities. Actual results may differ materially, including a total loss of investment.
- **Model limits.** Remaining initial capital is deducted (stage-weighted); finance costs, working capital and corporate overhead are not deducted in the base case; exploration permits and DFC warrants are valued at zero or unquantified; the start date and 28-year life are assumptions; the cost pad is 1.3x and the discount rate is 8%. These simplifications can materially overstate or understate value. See Table 8 and the Important Disclosures.
- **Compensation and conflicts.** Fifth Generation Advisers has received no paid compensation for this analysis from the Company or any other party. Holdings and other conflicts are disclosed in the Conflicts of Interest section.

Reserves, Resources and Plausible Value

PROJECT	P&P	M&I TOTAL	M&I EX-RESERVES	INFERRED	PLAUSIBLE	ATTRIB. (80%)
Dasa (100%)	73.0	109.3	36.3	51.4	104.7	83.8
Total attributable						83.8

Table 2. Units: Mlb U3O8, 100% basis. Probable reserve 8.04 Mt at 4,113 ppm = 73.0 Mlb (no proven) [2]; Indicated 10.09 Mt at 4,913 ppm = 109.3 Mlb and Inferred 4.45 Mt at 5,243 ppm = 51.4 Mlb at a 1,480 ppm cut-off (May 2023 MRE) [2]. The company website also cites 183 Mlb Indicated and 99 Mlb Inferred at a 100 ppm cut-off [8]; we use the higher-cut-off figures. Resources are assumed inclusive of reserves, so M&I ex-reserves is an approximation (provisional); reserves are recoverable and resources are contained. The project reports a reserve, so the 0.83 no-reserve weight is not used. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Plausible = P&P x 0.9 + (M&I minus reserves) x 0.65 + Inferred x 0.3

- P&P: 73.0 x 0.9 = 65.700
- M&I ex-reserves: (109.3 - 73.0) x 0.65 = 36.3 x 0.65 = 23.595
- Inferred: 51.4 x 0.3 = 15.420
- Total plausible: 104.715 Mlb (100%); attributable at 80% = **83.772 Mlb**

10-Factor Analysis

FACTOR	SCORE	RATING	RATIONALE
Properties / Ownership	6	Fair	Highest-grade deposit in Africa (4,113 ppm reserve), 80% owned, but a single asset in a Tier 5 jurisdiction [2]
People / Management	4	Weak	Repeated schedule slips (2025, early 2026, now H2 2028); direct capital up 74%; proposed class action filed Feb 2026 [1][9]
Share Structure	3	Weak	About 959M gross fully diluted; DFC warrants and more equity still required [3][4][7]
Location	1	High risk	Niger: 2023 coup, Benin border closure, export route unresolved [7][10]
Projected Growth	8	Strong	From zero to about 3.7 Mlb/yr; open at depth [2]
Good Buzz / Chart	2	Weak	Near 52-week lows (about $0.23-$0.24); fell about 21% on the unit offering [5][11]
Cost / Financing	5	Fair	AISC $31.49/lb is good, but capex up 74% and the DFC loan is conditional [2][3]
Cash / Debt	2	Weak	About US$59M pro forma cash vs US$152.7M equity hurdle and US$550.1M remaining cost [3][4][7]
Low Valuation Estimate	9	Excellent	EV about $86M, about $1.03 per attributable plausible lb
Upside Potential	6	Fair	SOTP at $100 is 5.1x price if financed and exported; timing and sovereign risk
Total	46 / 10 =	4.6	

Table 3. Equal-weighted, scored 1-10 under the Durrett 2.3 rubric. Judgment calls: Niger is not in the method's jurisdiction table (default Tier 3); we score it Tier 5 as analyst judgment. Management, Cost/Financing (AISC alone would score 9-10) and Cash/Debt scores are analyst judgment. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Radar Chart

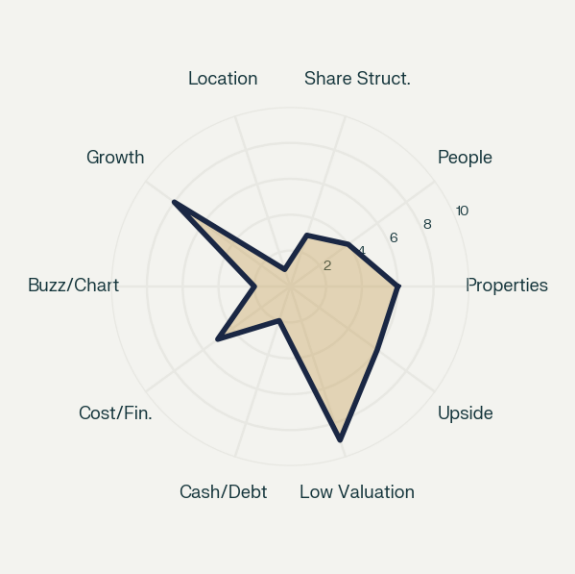

Figure 1. Ten-factor scores (navy line, gold fill).

Valuation: Sum of the Parts

Margin per lb = U3O8 price minus 1.3 x AISC (US$31.49 x 1.3 = **US$40.94**). Attributable plausible pounds (83.8 Mlb) are spread evenly over 28 years, which is 104.7 Mlb at the first-12-year rate of about 3.7 Mlb/yr [2]. The first cash flow is 2.75 years from today (start 2.25 years, H2 2028 commissioning plus ramp, plus 0.5 year mid-year timing), discounted at **8%**, then multiplied by the **0.80** stage factor. Remaining initial capital is deducted using the same 0.80 stage factor, spread over the two years before start with midpoint discounting (0.25 and 1.25 years). The unweighted-capital result is shown as a sensitivity.

PROJECT	ATTRIB. Mlb	START (yrs)	LIFE (yrs)	AISC $/lb	PADDED AISC	STAGE
Dasa	83.8	2.25 (assumed)	28 (assumed)	31.49	40.94	0.80

Table 4. AISC: 2024 Feasibility Study first-12-year average US$31.49/lb (cash cost US$25.38) [2]; not updated for the 2026 cost revision. The method requires AISC excluding initial capital and income tax; the study figure has not been decomposed, so it is provisional (if it includes income tax, the 30% pad double counts, which is conservative). Stage: Development and Construction. The 28-year life is an analyst extension beyond the 23.75-year reserve plan to spread plausible pounds. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

USD MILLIONS	LOW $85	BASE $100	HIGH $150
Dasa NAV (stage-weighted, 80% attributable)	1,019	1,365	2,521
Less: remaining initial capital (PV, stage-weighted)	(295)	(295)	(295)
Less: net debt	0	0	0
Plus: cash, Niger receivable, zinc JV	105	105	105
Equity value	**829**	**1,176**	**2,332**
Per share (958.8M gross fully diluted)	**$0.86**	**$1.23**	**$2.43**
vs. current price ($0.24)	**+260%**	**+411%**	**+913%**

Table 5. Remaining initial capital: US$433.5M direct capital to complete at June 30, 2026 [3], x 90% (Global Atomic funds its 80% plus Niger's paid 10%), PV at 8%, x 0.80 stage factor. Finance costs (US$66.9M) and working capital/corporate (US$49.7M) are inside the US$550.1M total but are not initial capital and are not deducted in the base case; both are shown in the sensitivities. Money spent after June 30 reduces remaining cost and cash together, so Q3 spend is not deducted from cash separately. Cash: C$30.0M at Jun 30 [7] plus about C$53.5M net of the Oct 1 offering [4] = C$83.5M = US$58.9M (provisional; offering costs estimated). Receivable: US$22.2M owed by Niger, not haircut [7]. Zinc JV: US$24M, about 6x annualized Q2 attributable EBITDA of US$1.0M (analyst assumption) [12]. Debt: none quantified in filings reviewed; leases not quantified. Fully diluted shares: 782.2M at Aug 13 (carried from the prior review; options and warrants included; not independently re-verified) + 113.9M + 57.0M warrants (C$0.70) + 5.7M broker warrants (C$0.50) = 958.8M [4][7]. No exercise proceeds credited, which is conservative. DFC warrants are not counted because the number is unpublished. No convertible notes. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

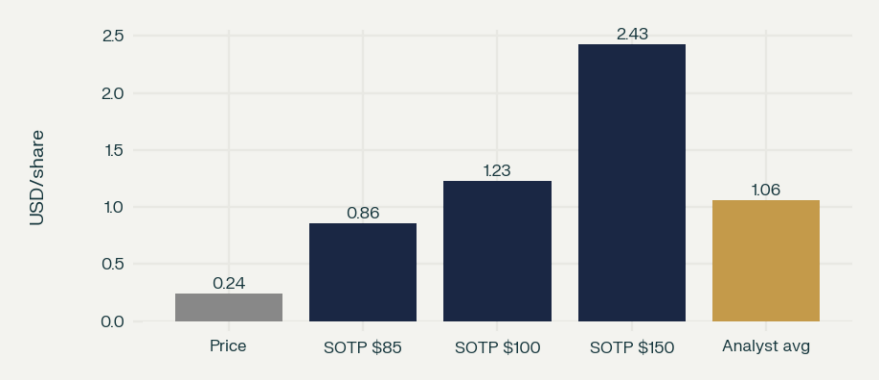

Figure 2. SOTP per share at $85, $100 and $150 vs. analyst average and price.

Sensitivities

CASE ($100 URANIUM)	PER SHARE	VS. BASE
Base case	$1.23	n/a
Initial capital deducted at 100% (unweighted)	$1.15	-6%
Full remaining cost US$550.1M incl. finance and working capital, unweighted	$1.05	-15%
Initial capital +10%	$1.20	-3%
Key-asset NAV haircut (-25%)	$0.87	-29%
Niger jurisdiction haircut (stage 0.40 on NAV and capital)	$0.67	-45%
AISC +25%	$0.98	-20%
Whole-project 2-year delay (capital moves too)	$1.07	-13%
US$152.7M equity raise at $0.24 (636M new shares, proceeds added, no fees)	$0.83	-32%
Basic shares only (604.2M)	$1.95	+59%
Memo: 5% discount rate	$1.81	+48%

Table 6. Illustrative; haircuts, delay and raise cases are analyst judgment, not company figures. Corporate overhead and cash burn are not deducted in the base case (omission can overstate value). All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Analyst Cross-Check

SOURCE	RATING	TARGET (USD)
Investing.com consensus (5 analysts); Barron's lists the same range	Buy	Average C$1.50 (about $1.06); high C$2.00, low C$0.60

Table 7. Source: [6]. Converted at 0.705 USD/CAD; target dates Oct 2026; the currency of the Barron's range is not stated. Aggregators overlap in coverage, so they are not independent estimates. Secondary data.

Input Assumptions Disclosure

INPUT	VALUE	BASIS
U3O8 price	$85 / $100 / $150, flat	Client scenarios; not a forecast
Discount rate / cost pad	8% mid-year / 1.3x	Client instruction (8% overrides the 5% default)
Remaining initial capital	US$433.5M direct (100%); US$390.2M at 90%	Company cost update, Sep 18, 2026 [3]; 90% share is analyst judgment
Remaining total cost	US$550.1M (incl. US$66.9M finance, US$49.7M working capital)	[3]; sensitivity only
FX	0.705 USD/CAD	Period-end C$1.42 per US$ [7]; quote ratio [5] (secondary)
Start / life	2.25 yrs / 28 yrs	Schedule [3]; life is analyst assumption
Cash / debt	US$58.9M / none quantified	[4][7]; provisional
Shares	958.8M gross fully diluted (604.2M basic)	[4][7]; 782.2M at Aug 13 carried forward (unverified); DFC warrants excluded

Table 8. Every secondary input and assumption is labeled above. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Capital Raise Outlook (18 months)

Probability of a meaningful raise (about US$35M or more): **80%**; forced raise: **40%**. The DFC term loan (US$397.4M) is available only after Global Atomic spends a further US$152.7M of equity [3], versus about US$59M of pro forma cash, a shortfall of roughly US$94M before any new spending. Options include more units, the C$50M ATM [7], offtake prepayments or a minority sale of Dasa [7]. A US$152.7M raise at $0.24 adds about 636M shares (66% of gross fully diluted).

This section is analyst judgment, not a sourced forecast. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Capital Raise History

DATE	EVENT	SIZE (USD)	ISSUE PRICE (USD)	NEW SHARES (M)	DILUTION %	SOURCE
Oct 1, 2026	Public offering (units with half warrant at C$0.70)	~$40.2M (C$56.97M)	$0.35 (C$0.50)	113.9	23.2%	[4]
Feb 2026 (approx.)	Bought deal plus private placement (units with warrant at C$1.15)	~$51.1M (C$72.5M)	$0.62 (C$0.88)	82.4	20.2%	[7]
Nov 2025 (approx.)	Financing (C$37M)	~$26M	not found	not found	not found	[13]
Feb 2025 (approx.)	Financing (C$35.6M)	~$25M	not found	not found	not found	[13]
Aug 2026	At-the-market (ATM) program, C$50M facility	up to $35M	n/a	not found	not found	[7]
Pending	DFC warrants (potential, unquantified)	n/a	n/a	not found	not found	[4]

Table 9. Dilution % = new shares / shares outstanding immediately before the event (Oct 2026: 113.9M / 490.3M; Feb 2026: 82.4M / 407.9M). USD figures use 0.705 and are approximate for older dates. ATM shares sold are marked "not found" because they could not be verified. Unverified dates are marked approx. All figures in U.S. dollars (USD); Canadian-dollar figures converted at 0.705 USD/CAD.

Red Flags and Investor Concerns

Red Flag: Technology / execution risk: Dasa is unbuilt. Direct capital rose from US$375.6M (2024 study) to US$653.0M, total cost is US$777.6M, and first production slipped from 2025 to H2 2028. Evidence for: US$227.5M spent and underground development ongoing. Evidence against: no commissioning date is fixed and DFC drawdown is conditional [1,3,9].

Red Flag: Location (1): Niger's military government took power in 2023; the Benin border used for uranium exports closed in mid-2023 with only an agreement in principle to reopen, and an Algeria corridor is unsigned. DFC conditions include a viable export route, an extended mining convention and permit, and assurances on repayments [3,7,10].

Red Flag: Cash / Debt (2): US$550.1M remains to be spent; US$152.7M of equity must come before DFC funds flow, against about US$59M pro forma cash [3,4,7].

Red Flag: Good Buzz / Chart (2): shares trade near their 52-week low (about $0.23) after a discounted offering, down from a $0.74 high [5,11].

Red Flag: Share Structure (3): basic shares grew from about 408M to 604M in 2026 through raises at C$0.88 and C$0.50; DFC will also receive warrants [4,7].

Red Flag: People / Management (4): repeated schedule slips and a proposed class action alleging misleading financing disclosure from Nov 2023 to Jan 2025 [9].

Red Flag: Cost / Financing (5): a strong AISC is offset by a 74% direct-capital overrun and a conditional loan [2,3].

Observations and Next Steps

Watch for: DFC definitive documents and condition satisfaction; a signed export route (Benin reopening or Algeria corridor); mining convention extension; Q3 2026 results (mid-November) for cash, debt and spend; any minority-interest sale. Verify: long-term debt and lease balances, warrant exercise prices, the fully diluted count in the Q2 MD&A share-data note, the AISC decomposition (tax and initial capital), and the Turkish JV carrying value.

Conflicts of Interest, Holdings and Compensation

ITEM	DISCLOSURE
Compensation for this analysis	Fifth Generation Advisers has not received, and will not receive, paid compensation of any kind from Global Atomic, its officers, directors, affiliates, underwriters or financing agents, or from any other third party, for the preparation or publication of this analysis.
Independence of the analysis	This analysis was prepared by Fifth Generation Advisers using public information, without review or input from Global Atomic. It is intended to be an objective, independent assessment. No analysis is free of bias: the model assumptions, scores and judgment calls are ours and are identified in the report, and the conflicts listed here may still influence our views.
Positions	As of October 27, 2026, the aggregate holdings of Fifth Generation Advisers, its principals and employees in Global Atomic (GLATF / GLO) are less than 100,000 shares. Advisory clients do not hold GLATF.
Trading restrictions	All personal trades in GLATF / GLO are subject to the firm's Code of Ethics and pre-clearance. No trades are placed for the firm or its clients ahead of publication on the basis of this report.
Other relationships	In the past 12 months, Fifth Generation Advisers has had no investment-banking, advisory, consulting, finder or other business relationship with Global Atomic.
General and impersonal	This report is general and impersonal. It is distributed to all recipients on the same terms, is not tailored to any recipient, and is not the basis for personalized advice. Any advice to advisory clients is given separately, after review of that client's circumstances, and may differ from the views here.
Updates and withdrawal	Rating as of October 27, 2026. Fifth Generation Advisers has no obligation to update this report. Material changes or a withdrawn rating will be distributed to all recipients through the same channel as this report.
Third-party method	The 10-factor framework follows Don Durrett's published method. Fifth Generation Advisers is not affiliated with, endorsed by or compensated by Mr. Durrett; scores and weightings are our own application and judgment.

Important Disclosures

Method adapted from How to Invest In Gold and Silver - D. Durrett: https://a.co/d/01XVxUfE. The uranium assumptions and adjustments are Fifth Generation Advisers' application of the framework, not a claim that Mr. Durrett endorses this analysis.

Adviser status. Fifth Generation Advisers is a registered investment adviser. Registration does not imply a certain level of skill or training. Our Form ADV Part 2A and Form CRS are available on request and at adviserinfo.sec.gov.

Compensation and independence. Fifth Generation Advisers has received no paid compensation for this analysis from Global Atomic or any other party. The analysis is intended to be objective and independent of the issuer; however, no analysis is free of bias. See the Conflicts of Interest, Holdings and Compensation section.

Nature of this report. This report is general and impersonal, for informational purposes only. It expresses general opinions on a security and is not tailored to any individual's circumstances. It is not investment, tax or legal advice, and is not an offer or solicitation to buy or sell any security or an offer of advisory services. We are primarily focused on quantitative analysis; this report does not replace qualitative, fundamental or suitability review.

Scenarios are not forecasts. Per-share values, upside percentages, sensitivities and capital-raise probabilities are hypothetical, illustrative outputs of the assumptions in the Input Assumptions Disclosure. They are not price targets or predictions. Metal prices are held flat; the discount rate and cost pad are analyst choices. No assurance is given that any scenario will occur.

Model limitations. The model does not deduct finance costs, working capital or corporate overhead in the base case, values exploration permits and DFC warrants at zero, and uses an assumed start date and mine life. These simplifications can materially overstate or understate value. Small changes in inputs can produce large changes in results. Model outputs are not audited.

Mineral resource figures. Reserves and resources are estimates. Inferred resources have the lowest geological confidence and are speculative. "Plausible" pounds are our own weighting of reserves and resource categories; they are not a category recognized under SEC Regulation S-K Subpart 1300 or NI 43-101, and no qualified person has verified them. Resources are not reserves and have no demonstrated economic viability.

Sources and data. Inputs are drawn from company-published reports and filings. Any input from a secondary source, estimate or assumption is labeled as such. We have not independently verified all information, and data may be out of date or incorrect.

Principal risks. Investing in this security involves substantial risk, including loss of all principal: commodity price risk; financing and dilution risk (including DFC warrants and ATM equity); permitting, regulatory and political risk in Niger; operating and execution risk (cost overruns, schedule slips); liquidity and volatility of a micro-cap with TSX and OTC listings; cross-listing and currency risk (the company reports in Canadian dollars); and estimation risk in resource and reserve figures.

No performance record. This report does not show the performance of any Fifth Generation Advisers portfolio or account. Past performance does not guarantee future results.

Distribution. Not for redistribution. It is not directed to anyone in a jurisdiction where distribution would be unlawful. Do your own due diligence and consult a qualified professional before making any investment decision. All figures are in U.S. dollars; foreign-currency amounts are converted at the rate stated in the footnotes.
